

What to see

The newest product from **AIM Sports** is SmartyCam – the only onboard camera with technical data overlay. It has recently been added to the company's consolidated market leaders, MyChron – a milestone in kart and junior dragster worlds – and MXL, one of the most popular dataloggers among racers of all series around the world. Each AIM system is designed, manufactured and tested by its technicians. The R&D team is composed of electronic and mechanical engineers, physicists and other specialists to develop firmware, software and hardware.

Crankshaft and con rod manufacturer **Arrow Precision Ltd** has recently expanded its manufacturing capabilities again by investing in two CNC crank milling and turning machines and a rigid polishing machine for use on main and crankpin journals. The milling machines have expanded Arrow's capability to undertake rapid machining of offset crank journals. The rigid polishing machine allows the optimization of journal surface finish and cylindricity. It also provides the opportunity to modify the surface profile during the polishing process. Arrow has also strengthened its design capabilities with the addition of a further design engineer to the design team.

LöWen Rally represents helmet maker Stilo srl in Germany. Stilo helmets combine fantastic Italian design with innovative helmet technology. Together with safety and comfort the helmets offer integrated speakers and microphones. This is standard in rallying but can also provide a strategic advantage to drivers in circuit racing. The ST4 helmet can additionally be equipped with an integrated drinking or ventilation system. The ST4 comes in three versions: Formula, GT and Rally, all homologated to the latest F1 standard, FIA 8860-2004.
